COMPAQ

Important PA-2 and InterTrust Information

MusicMatch software includes InterTrust (DigiBox) security for protected files. Effective January 2002, InterTrust no longer supports this security. The following message can appear when MusicMatch is used to download content to the PA-2:

When you see the dialog box shown above, click the **No** button twice.

The InterTrust (InterRights Point) software needs to be removed from your system to avoid these messages from coming up in the future. This can be achieved simply by following these instructions:

1. Click the **Start** button on the Windows desktop.
2. Select **Programs** (**All Programs** in Windows XP).
3. Select **InterTrust**.
4. Select **InterRights Point**.
5. Select **Uninstall InterRights Point**.
6. Answer **Yes** to the prompt to remove InterTrust InterRights Point and all its components.
7. Select **OK** when warned the "Intertrust Music Pack Manager" will be affected.
8. Select **Yes to All** when prompted "Are you sure you want to remove the shared file?"
9. Select **Yes** to confirm you have chosen to remove all shared components which the system indicates are no longer being used.
10. When Uninstall is complete, press **OK** to close the window.

The InterRights Point Icon will be removed from the lower right corner of your screen and the issue will be resolved.
